[FAQ \(Frequently Asked Questions\)](#)

Introduction

The ACM WordPress Theme provides a look-and-feel that's similar to the look of the ACM main website - <https://www.acm.org> .

It is available for download at:

<https://services.acm.org/public/infodir/wordpress.cfm>

Occasionally, there will be updates to the Theme, and the site administrator will be prompted to install them through the WordPress dashboard.

As of May, 2023 the current version is 2.0.

Main changes:

- 2.0 Gutenberg full site editing is added

- 1.4.1 Security improvements

For more information on previous versions please [Download](#) previous version of documentation.

Before Updating

One of the major changes to the theme is the admin dashboard URL. Please see [the instructions on how to get to the admin dashboard](#) in the latest version of the theme.

Please make sure that any changes you make (or have made) to your WordPress theme are done in the so-called “child theme” – you can read more about the “child theme” and how to use it [here](#). You should also check version compatibility between the new Theme and the plugins to your current site. You may need to use the ACM Theme upgrade version 1.4, which contains security fixes to v 1.3.0. You can avoid losing your customizations by making your custom changes in the child theme before attempting to update the ACM Theme.

If you run into any issues, please provide full details of plugins and versions to ACM’s technical team at technicalsupport@acm.org, stating clearly which version of the ACM Theme you are currently using and which version you are attempting to upgrade to.

Version 2.0 introduces full site editing by turning on the Gutenberg block editor by default (you can switch back to PHP templates in “ACM Theme Settings” tab, but it won’t be possible in future updates), so all blocks previously placed in widget areas are now considered outdated. You can keep them, but in order for the website to function properly you need to copy those blocks from the footer widget area to ACM Footer block and from the sidebar widget area to ACM Sidebar see how [here](#) (step #11).

Requirements

Please notice that for 2.0 version of ACM WP Theme you need:

- WordPress version 6.1.1 or higher
- Php version 7.4 (as for Feb. 2023 WordPress support php 8.0 only in [beta regime](#), please use 7.4 for now)
- Advanced Custom Fields plugin (free version is enough)

Installation of Theme

0. Before we start:

- Please look at [requirements](#) first
- Make sure you have your wordpress installation configured on your web hosting.
- Go to <https://services.acm.org/public/infodir/wordpress.cfm> and download the latest version of the theme.

1. Go to your website url i.e. <https://women.acm.org/>

2. Click on English (United States)

3. Click on Continue

4. Type the name of your website, i.e. "ACM"

you'll be on your way to using the most extendable and powerful personal publishing platform

Information needed

Please provide the following information. Do not worry, you can always change these settings

Site Title

Username

Usernames can have only alphanumeric characters, spaces, underscores, periods, and the @ symbol.

Password

Made with Tango.us

5. Type the Admin username, i.e. "AdminACM"

Information needed

Please provide the following information. Do not worry, you can always change these settings

Site Title

Username

Usernames can have only alphanumeric characters, spaces, underscores, periods, and the @ symbol.

Password

 Hide

Strong

Made with Tango.us

6. Enter your password. Please do not use simple passwords. General recommendations for strong passwords provided below:

- Include numbers, capitals, special characters (@, #, *, etc.)
- Be long (10 characters – minimum; 50 characters – ideal)
- Can include spaces and be a passphrase (Just don't use the same password in multiple places)
- Change passwords every 120 days, or 4 months

Search engine visibility Discourage search engines from indexing this site

It is up to search engines to honor this request.

Made with Tango.us

8. Click on "Install"

9. You will be redirected to the summary page. Click on Log In

10. Enter login and password

11. Click on Log in (in case of failure try to enter data one more time and click on "Log in" again)

12. Now You have to install the theme.

Please look at vertical Dashboard on the left side, find Appearance tab there, hover on it, click on "Themes"

13. Click on Add New

14. Click on Upload Theme

15. Drag and drop acm.zip file to the area you see on the screenshot

filter

16. Click on Install Now

in a .zip format, you may install or update it by uploading it here.

acm-test.zip

Made with Tango.us

17. You will be redirected to the summary page. When the the theme will be installed, please click on Activate

The screenshot shows the WordPress dashboard's 'Appearance' section. The left sidebar contains navigation links: Dashboard, Posts, Media, Pages, Comments, Appearance (highlighted), Themes, Editor (beta), and Plugins (2). The main content area is titled 'Installing theme from uploaded file: acm-t' and displays a progress log: 'Unpacking the package...', 'Installing the theme...', and 'Theme installed successfully.'. Below the log, there is a blue 'Activate' button with a red border and a blue link 'Go to Themes page'. A 'Made with Tango.us' watermark is visible in the bottom right corner.

Installation of Required and Optional Plugins

1. Make sure you are still in Administrator Dashboard
2. Take a look at the notification on top of the page.

This notification says that there are 2 types of plugins:

- Required
- Optional

We need to install required plugins for our theme to work correctly.

3. Click on Begin installing plugins

4. Check Advanced Custom Fields plugin

5. Choose Install from the drop down menu near the Apply button, then click on Apply

6. Wait until the plugin will be installed (it may show empty screen for several second, don't close the window or click to another link, just wait please)

Optional: Click on Return to Required Plugins Installer

The installation and activation process is starting. This process may take a v

Customization

The Theme supports customization by three types of sites: Conferences, SIGs, and Chapters. Skip this section if your site does not fall within these three types.

You can set up and add items to menus through the “Appearance”, “Menus”, “Edit Menu” interface, following the standard WordPress functionality for menu setup. Please reference the “WordPress Menu User Guide”, at https://codex.wordpress.org/WordPress_Menu_User_Guide.

1. Click on Dashboard

2. Find widget called Type of site

3. (Read the description below first) Chose a type of site and click on Create

In this step you are creating a menu and pages from the pre-made set of settings. If you plan to create your custom type of website - please skip this step.

4. Optional: Now you can see what menu items were created - click on Menu

5. Optional: You will find all the information in this section

To complete the installation, we need to create the Search Index of your existing WP posts data. To start t

Reset Customization

Please note that if you press the “Reset type of site” button in Dashboard - all created pages and menus will not be removed automatically. You need to delete pages and menus manually in case you need it.

The screenshot shows the WordPress dashboard interface. At the top, there is a navigation bar with icons for home, ACM, a refresh button with a '1' notification, a 'New' button, a '1' notification, and an 'Events' button. The left sidebar contains a menu with the following items: Dashboard (selected), Home, Updates (1), ACM Theme Configuration, Posts, Events, Media, Pages, Comments, Appearance, Plugins (1), Users, Tools, Settings, Custom Fields, and Full Text Search. The main content area displays a list of updates and a 'Type of site' widget. The 'Type of site' widget shows 'Your site type is: Sig' and includes a 'Reset type of site' button. Below the button, a note states: 'Resetting the theme set-up will give you the option to change the site type. Note this will not delete existing menus so you will end up with duplicates if you have not manually removed these first in appearance/menus.'

*Resetting the theme set-up will give you the option to change the site type. Note this will not delete existing menus so you will end up with duplicates if you have not manually removed these first in **appearance/menus**.*

How to

How to Use New ACM Gutenberg Blocks

The Gutenberg editor itself is not a new thing in the WordPress world, but some of its features are still in beta testing right now. Although, it is clear that modern WordPress interface development will be slowly moving from traditional php templates to Gutenberg blocks every year. So, in order to be consistent with modern workflow The Gutenberg blocks are now introduced as a primary way of editing the website. Here you will find the instructions on how to use these blocks with ACM theme.

Note that sometimes you could face issues with Gutenberg. In this case please contact us by email.

1. Hover over Appearance, then click on Editor

2. Click on block Header 2 times on empty space in the block in order to select it

3. On the right side you see block settings

Here you can choose:

- a different logo for the header
- type custom text in the center of header
- choose top small, secondary, and primary menus

4. Click on Choose an image

This header is dynamic, so try to change menu, logo, or text. Please visit identitystandards.acm.org for logos and banners (link in logo image section).

Logo image ^

Choose an image

CENTER TEXT

Welcome to our website! 123

Choose top small menu v

Choose secondary menu v

Choose Made with Tango.us

sidebar (click

Alison Pierson
Vanilla Lita
math: $y = 0$

8. Click on Choose top small menu and select needed menu from the drop down

9. Now you can move to ACM Banner. Click on it. You will find similar set of parameters as in ACM Header

10. Type some text in fields in order to override defaults. I.e. "Text 1 text 1"

11. Click on Block: ACM Side Bar

You can insert blocks inside of this side bar, but be careful, on this slide you can see incorrect "+" button, don't press it because you will insert additional blocks below the Sidebar, which will lead to incorrect layout. Now you can press Save (or Update) to save your progress. In order to safely change sidebar I suggest to press on "Home Side Bar" as you can see on the screenshot (or any other template name depending on what template you are editing right now) on the top of the page, select "Browse all templates", then, in the left sidebar click "Template parts" and click on "Side Bar".

If you made a mistake, don't worry, you can check the structure of your template (see next slide) and change it, or undo all changes (see screenshots below).

12. Click on Block: ACM Side Bar in some empty area and you will see the correct "+" button

13. Click on "+" button and select a block you want to add

14. Choose an image and set up this block according to your preferences

15. Now you can start editing ACM Footer click on block 2 times in some empty area

You will see more settings then before, you can:

- choose a bottom menu
- choose a bottom logo
- hide icons and change their links
- add different blocks inside to footer

- change the number of columns for mobile, tablet and desktop modes (only numbers without spaces)
- insert a phrase near the bottom menu

16. For example, you can insert a table, and give it background transparent from settings

17. I.e. you can uncheck Mastodon icon if you don't have an account on this platform

18. And click on Save (or Update) to save the progress!

How to Access Admin Dashboard

From version 1.4.1 the theme received new security features including integrated WPS Hide Login. You can read more about it [here](#), but the main point for you as a user is that now you have to access your website via the “acm-management” route.

I.e - <https://your-subdomain.acm.org/acm-management> instead of traditional “wp-admin” <https://your-subdomain.acm.org/wp-admin>.

In order to change the route please follow these steps:

1. From your Admin Dashboard click on Settings

2. Scroll down or click on WPS Hide Login

3. Here you will find current set up, by default is is acm-management

plugin is kindly brought to you by [WPServeur](#) (WordPress specialized hosting) [VPS Bidouille](#), the plugin [WPS Cleaner](#) and [WPS Limit Login](#)

`http://acm-clean.test/` `/`

protect your website by changing the login URL and preventing access to the wp-login.php page

`http://acm-clean.test/` `/`

redirect URL when someone tries to access the wp-login.php page and the wp-admin directory

Made with Tango.us

4. You can also specify the route to a specific page in case somebody tries to access your Admin panel via standard route.

[VPS Bidouille](#), the plugin [WPS Cleaner](#) and [WPS Limit Login](#)

`/acm-clean.test/` `/`

your website by changing the login URL and preventing access to the wp-login.php page

`/acm-clean.test/` `/`

redirect URL when someone tries to access the wp-login.php page and the wp-admin directory

Made with Tango.us

How to Use suggested plugins?

1) Advanced Custom Fields

You see this plugin only when you are editing pages. In the bottom left you see the "Banner box" heading, click on it.

The box will open up and you will be able to insert banner data for this page.

After it, please press the "Update" button in the top right corner and you will get a banner on the page.

2) Duplicator

This plugin helps you to make backups of your website and restore it when needed. You can even run this backup on your local computer (run development server) using XAMPP, Laragon or similar software, do changes locally (for example an update of plugin or theme) and then do the same on your production server (or do the same backup with Duplicator and then apply this backup to your production server). If you are not a technical specialist, avoid doing those manipulations.

3) WP Migrate DB

Helps to copy WP database(s) in SQL format.

4) The Events Calendar

You can create events and share them with users of your website. It supports google calendar. As an alternative, you could use social networks for the same purpose and just insert the feed into the right sidebar of the website.

5) Appointment Booking and Online Scheduling Plugin by vCita.

This is a tool which is similar to "The Events Calendar", but has more options and integrations, but might be too complicated for smaller websites.

6) Yoast SEO

Well known WP plugin for SEO optimization. You can install it and use from the very beginning. It will help users to find your website.

7) WP Fast Total Search

This plugin helps to search your pages and posts faster. Especially helpful when you have a lot of pages and posts.

Questions? Contact ACM at mktg@acm.org

FAQ (Frequently Asked Questions)

1) What version of the theme should I use?

In case you are installing the theme for the first time - please use the latest version. As for 2023.02 it is ACM Theme 2.0. If you are already using any of 1.x versions, then you should

consider upgrading your theme to 1.4.1, which is the last version in 1.x branch. Also, in the near future it is reasonable to upgrade to 2.0, it will require some specific actions in order to migrate successfully. Please read [this section](#) first.

2) What is the difference between 1.x and 2.x visions of the theme?

In version 1.x the primary theme design was built with classic php templates. However, in version 2.x the theme uses gutenber blocks instead. (you can read about gutenber [here](#)) In 2.0 you can still turn the gutenber editor off (and use old php templates), but in future versions this option will not be available.

Security improvements:

- Now the theme uses WPS Hide Login in order to avoid bot attacks to standard admin panel url.
- Other build-in plugins were updated.
- Javascript builder was upgraded
- Autoupdates were removed

The reason for this is that we expect users of the theme to be involved in the update process. You don't usually know how the software will be updated, it may break your website. In order to avoid problems with that, please read the release notes first, then read feedback from users who already updated their theme/plugin, make a backup (you have a suggested plugin called "Duplicator", you can use it for making backups before the update, so you could go back if something would break your website).

- Digital library integration was removed (ACM migrated to new platform)

3) Will my site look the same when I upgrade from 1.x to 2.0?

No, It will look and behave differently in most cases. Widgets are no longer supported in Gutenberg's version of 2.0, so You will need to copy all Gutenberg blocks from widgets to "ACM Sidebar" block and "ACM Footer" block.

4) What to do if I choose a wrong type of site during the set up?

It is absolutely ok, just please delete unnecessary menus form Appearance->Menus

1. Click on Menus

2. Press “Delete Menu” at the bottom of the page.

Thank you for reading the whole documentation, please do not hesitate to inform us of any issues with this documentation or the theme itself. We want to make it as convenient as possible for the end user. Our email address is:

- technicalsupport@acm.org
